CTcoin Pelican 309

Coin Counting and Sorting Machine

The Pelican – a unique desktop machine from CTcoin™

The Pelican is the result of CTcoin's long tradition for product development combined with a successful collaboration with Bang & Olufsen designer David Lewis. The Pelican has a high level of counting accuracy and is designed to satisfy the market's need for modern bank and office equipment.

Improved functions

The new generation CTcoin alloy sensor enables the machine to reject foreign coins with a minimal difference in diameter, thickness or metal content.

It counts up to 20 different denominations and sorts into 9 different drawers (+ one reject drawer).

The new kind of housing makes the machine secure to use and gives the operator easy access to the hopper, sensor and rail. The sensor can be tilted so that the coin rail is very easy to clean.
